Dear Hiring Manager,

I'm writing to express my interest in a data analyst position where I can apply my technical skills and analytical mindset to solve complex business problems. With hands-on experience in tools such as SQL, Python, Tableau, Power BI, and cloud services like AWS and Azure, I bring a strong foundation in data analysis and dashboard development.

In my previous roles and internships, I developed multiple BI dashboards, automated reporting pipelines, and worked on large-scale datasets to derive actionable insights. At ElevateLabs, I engineered SQL-based ETL pipelines that reduced manual effort by 60% and deployed Tableau dashboards integrating multiple datasets. I've also worked with Deloitte Australia on a job simulation where I built fraud detection dashboards and automated Excel-based pipelines.

Beyond my work experience, I've executed end-to-end projects such as a YouTube Trending Analysis Dashboard and a Customer Lifetime Value Prediction model, showcasing my ability to drive insights from unstructured data and build ML models to support business strategies.

I am eager to bring this problem-solving approach and technical rigor to a forward-thinking team. I'm open to challenging roles that offer the opportunity to make an impact through data-driven decisions.

Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to your organization.

Sincerely,

Ayush Katkar
